1. Introduction
This document is the release note for VideoXpert Integration with JCI P2000. The objective of this document is to provide information about the released version of integration component, its features, installation details and known issues.

4. System Overview
The proposed solution is an integration driver for JCI P2000 security management system. This integration helps JCI P2000 to connect with VideoXpert. The integrated system allows end user to use VideoXpert to access information from JCI P2000. VideoXpert users may use Admin Portal or OpsCenter Client to view or acknowledge access control events from JCI P2000.
The integration driver shall be using VxSDK for all its interfacing needs with VideoXpert. The integration driver also supports Pelco Access Control System Viewer to allow user information retrieval and control functionality of JCI P2000 devices in VideoXpert. This includes viewing JCI P2000 access control points and user lists in VideoXpert and sending control commands to the access control points.

5. Platform Specification

<table>

</tr>
<tr>
<td>4</td>
<td>Hard Disk</td>
<td>500GB</td>
</tr>
</tbody>
</table>

*Table 5: Platform Specification*

6. Prerequisites

The VideoXpert JCIP 2000 installs as a standalone windows service which integrates to the Access Control System plugin and the following are the prerequisites for this integration driver.

1. VideoXpert v3.x
   VideoXpert software should be installed and licensed for the proper functioning of the integration.

2. Access Control System Viewer Plugin
Some features of this integration require the Access Control System Viewer plugin to be installed on the VxOpsCenter console machines.

3. Configuration in JCI P2000 system

Remote Server Settings configuration is required on the JCI P2000 system to allow events to be sent to the driver.

The PC on which this driver will be installed needs to be added into the JCI P2000 as a remote server to allow P2000 events and alarms to be set to the driver.

Contact your JCI P2000 administrator to add this configuration. This integration requires

- **Transmit messages to this server** to be enabled
- Enter a **Port** that the driver will be configured to listen on for events (see Alarm Port in section 7.2.3)
- Select the **XML Protocol** option.

![Figure 2: P2000 Remote Server Settings](image)

External IP configuration must be set to allow retrieving access point and user information and commands to be issued to the P2000 server.

The JCI P2000 driver PC must be added as an external IP and enable the **Use XmlRpc** option.

![Figure 3: P2000 External IPs Settings](image)

The **P2000 XmlRpc Interface Port** configured in the **Site Parameters** should be noted as will be required later.
7. Installation Steps

7.1. Step 1 – Start installation

Double click on the VideoXpertJCIP2000_Setup-x.x.x.x.exe file to start the installation. Installation wizard starts with the following window.

![Installation home screen](Image)

Click **Next** button to start installation.

7.1. Step 2 – License Agreement

Accept the agreement and click **Next** to continue.
7.2. Step 3 – Install Location
The install location is shown and can be changed from the default location if required.

Click on Next to and then Install to start the install process.
7.3. Step 4 – Driver Configuration

The JCIP2000 Driver Service Configuration Application opens.

7.3.1. Pelco VideoXpert Connection

Enter the following fields in the Pelco VideoXpert Connection Info section:
• **Server**: Enter the hostname or IP address of the VideoXpert server  
• **Port**: Enter the port VideoXpert VX System is configured with.  
• **User**: Enter the username for a VideoXpert user with access to the system.  
• **Password**: Enter the password for a VideoXpert user with access to the system.  
• To test the connection information is correct click on the **Test Connection** button. If all the fields are correct a **Successful connection** message will appear:

![Successful connection](image)

*Figure 10: VideoXpert connection test success*

If connection fails check the configuration tool logs from the application **Logs** menu and check all fields are entered correctly.  
• Click on **Save Settings**.

### 7.3.2. JCI P2000 Connection

Enter the following fields in the **JCI P2000 Connection Info** section:

• **Server**: Enter the hostname or IP address of the P2000 server  
• **User**: Enter the username with access to the P2000 system.  
• **Password**: Enter the password for the P2000 user.  
• **Password Mode**: Select the password mode for the P2000 XmlRpc interface. Note: this value is saved in the P2000 system configuration under Site Parameters⇒XmlRpc (If ignore is set on server the password can be left blank here as it will be ignored).

![Password Mode](image)

*Figure 11: P2000 Password Mode*

• **Alarm Port**: Enter the port to use for the alarm port, this is the port created on the driver PC to listen for incoming events from P2000. Firewall settings may need to be configured to allow incoming traffic on this port from the P2000 server. Note: this value is configured in the P2000 system configuration under Remote Server⇒<Server name>⇒Port
• **Command Port**: Enter the P2000 XmlRpc Interface port, this setting is configured in the P2000 system configuration under Site Parameters → Port Configuration → P2000 XmlRpc Interface Port

**Figure 14: P2000 connection test success**

If connection fails check the configuration tool logs from the application **Logs** menu and check all fields are entered correctly.

• Click on **Add** to add the new configuration to the list of P2000 systems.
• To edit a field:
  o Select the system in **JCI P2000 Systems** list
7.3.3. Driver Service IPC Settings

Enter the following fields in the **Driver Service IPC Settings** section:

- **IP**: Enter the IP address of the PC where this driver is installed. (If multiple network interfaces use the one which will be used to connect to from the VideoXpert Access Control Viewer.
- **Port**: Enter the port the IPC server will be listening on.

Note: The IP and port settings above will be used in the VideoXpert clients when connecting to this driver interface using the Access Control System Viewer. See **IP Address** and **Port** fields below:

![Access Control System Viewer IPC Settings](image)

*Figure 15: Access Control System Viewer IPC Settings*

- **Certificate**: If SSL communication is required between IPC client/server enter the path to the SSL cert personnel exchange format file (.pfx file).

7.3.4. Manage Situations

- Click on the **Manage Situation** button under **General Driver Options** to configure the JCI P2000 situations list that will be imported into Pelco.
- The manage situations window will open as follows:
The configurable fields are:

- Name – This must be edited before starting service for the first time as Situations are imported into VideoXpert they can only be edited via VxToolbox.
- Severity – This must be edited before starting service for the first time as Situations are imported into VideoXpert they can only be edited via VxToolbox.
- ACK Needed
- Enabled – disabling will filter the event type at the driver and events will not be injected into VideoXpert.

Some Event types also have Sub Event types. By clicking the event type if there are sub event types available then the lower table will populate with the sub event types.
Events are created as follows in VideoXpert:

- If the sub event type is enabled that sub event type will appear in VideoXpert
- Otherwise if the parent event type is enabled then that sub event will appear in VideoXpert with the parent event type name
- Other if neither sub event type or parent event type are enabled that event will be filtered out and not be sent to VideoXpert.

- When complete click **Save**.

### 7.3.5. Manage Linked Cameras

This allows cameras to be associated with events in VideoXpert based on the P2000 terminal (access control point) where the P2000 event occurred.

- Click on the **Manage Linked Cameras** button under **General Driver Options** to configure cameras for P2000 access control points.
- The **Pelco Camera / P2000 Access Control Point Management** window opens

![Pelco Camera / P2000 Access Control Point Management](image)

**Figure 17: Pelco camera / P2000 Access Control Point association**

- Select the P2000 system (Note: if this list is empty exit this window and click on **Save Settings** first)
• Click on **Import Access Control Points**. This will attempt to connect to the P2000 system configured in the previous sections and import the list of P2000 access control points into the list.

• Select a Access Control Point in the list.

![Figure 18: P2000 Access Control Point selection](image)

• To associate a camera (or cameras) with the terminal click **Add**.

• A connection is made to VideoXpert and imports a list of video sources.

![Figure 19: Pelco camera selection](image)

• Select one or more of the video sources and click on **OK**.

• The cameras will be associated with the selected P2000 Access Control Point.
• To configure a PTZ for this linked camera Enter the PTZ Preset name in the **PTZ Preset Name** field.

  **Note**: After adding the camera the selecting list attempts to retrieve the list of PTZ presets from Pelco and populates the list. However, the auto-population doesn’t occur the PTZ preset name can still be entered manually.

• When an event occurs is received in Pelco associated with this Access Control Point with this linked camera, a command will be sent to go to this PTZ preset if this field is configured.

• To disassociate a video source from a Terminal select the video source and click **Remove**.

• When mapping configuration is complete click **Save** to save and exit.

• Click on **Save Settings** to commit the changes.

### 7.3.6. Driver Service Control

The VideoXpert – JCI P2000 Driver can be started/stopped from within the **Driver Service Control** section.

**Important Notes:**

- If any settings are changed the driver service must be restarted for the driver service to load the new settings.
- This configuration application can be found in the start menu under **Pelco → VideoXpert JCI-P2000 → JCI-P2000 Driver Configuration** and can be run from there to change settings after installation.

Click **Close** when all configuration is complete to close the configuration application and continue the install process.

### 7.4. Step 4 – Install Complete

Click **Finish** button to finish the installation.
8. System Configurations
The configuration application as described in the previous section can be found in the start menu under Pelco → VideoXpert JCI-P2000 → JCI-P2000 Driver Configuration and can be run from there to change settings after installation.

9. Uninstallation Steps
9.1. Step 1 – Start the Uninstallation
In order to uninstall open windows Programs and Features and click on Uninstall for the VideoXpert JCI-Pelco P2000 Driver entry.

The following window will be shown. Click the Next button to start uninstallation.

9.2. Step 2 – Uninstall Complete
The driver will be removed from the system.
